### Test case:

Creating a site page with a table of clients, the ability to add customers and the ability to delete a client

### Step-by-step:

When we go to the site, we see a table with clients, when we click on the 'Add client' button, a menu appears where we need to enter the client's data and when we click the 'Submit' button, the client is transferred to the list. In the table itself there is a column with a cart icon, when it is clicked, the client opposite which the basket was located is removed from the list. Also on the page there is a 'HOME' button, when pressed, we will go to the main page

### Resultado esperado:

When creating a client, the data must meet the following characteristics:

Name- only letters.

Car- any symbols.

Phone number - only numbers, only 9 numbers.

Email-must contain the mail domain.

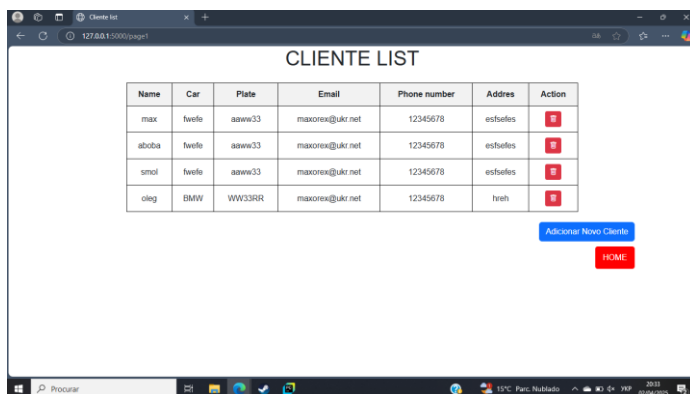

Address- any symbols.

License- only 6 characters.

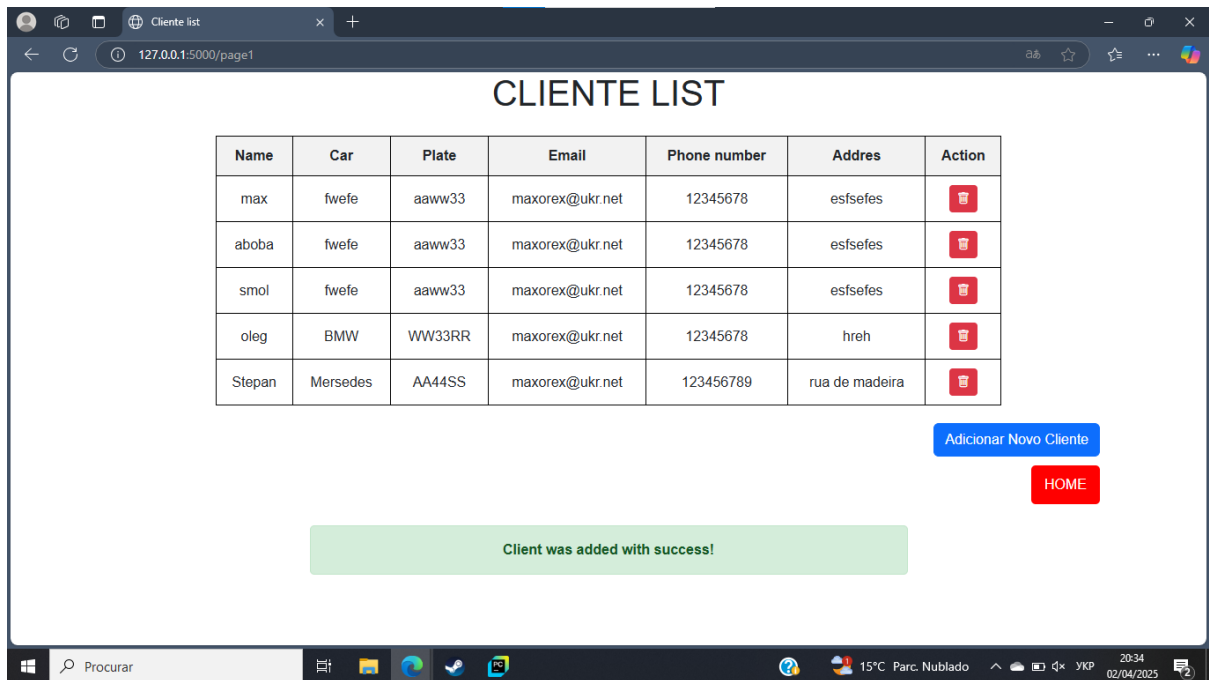

If at least one of the data does not meet the above characteristics, the site displays a certain message

### Result obtained:

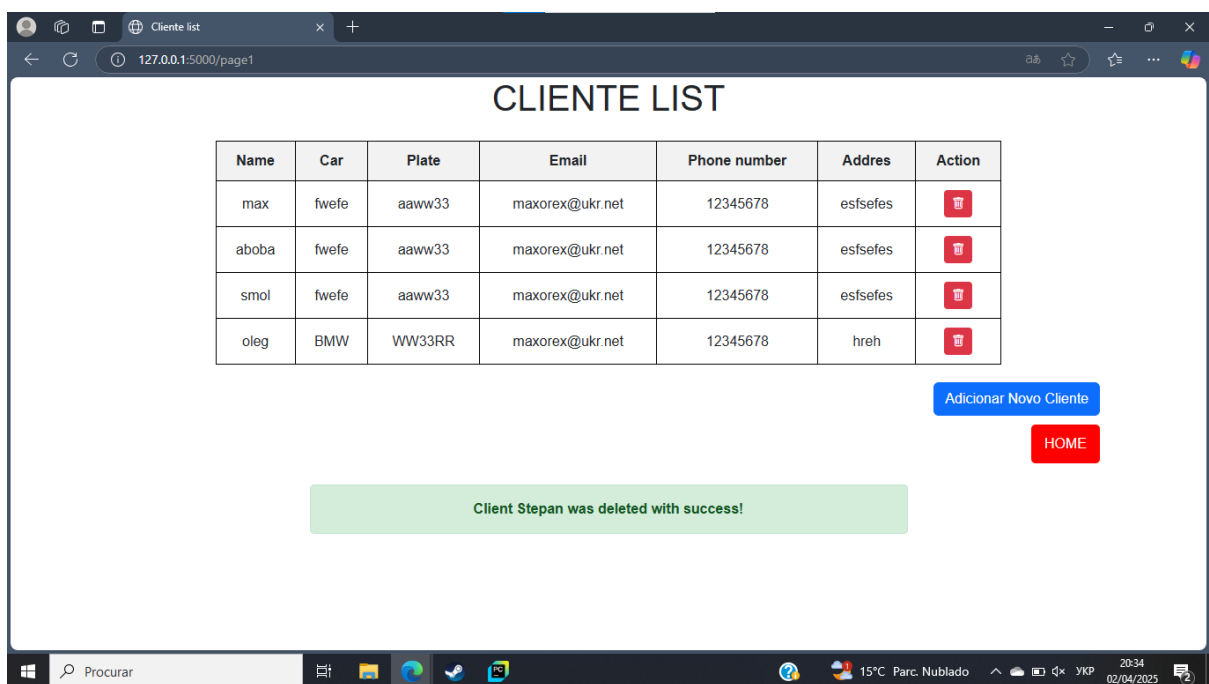

The result obtained meets expectations

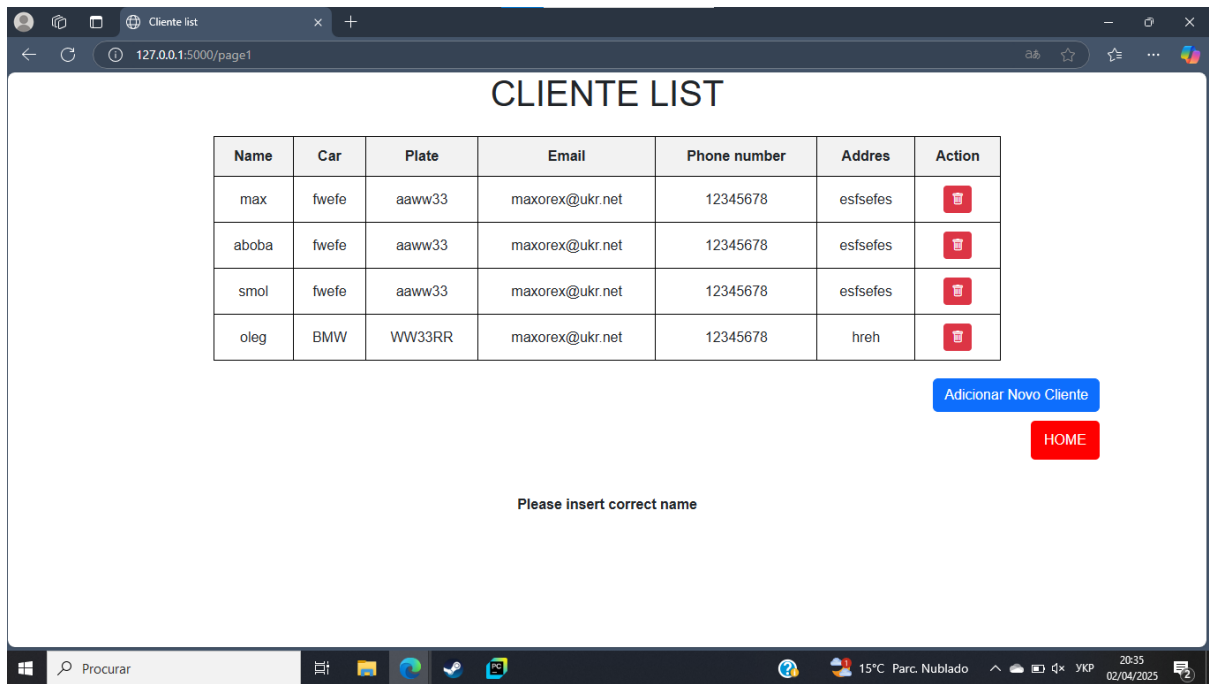

Example of page

Example of adding a client

Example of deleting a client

Example of error
