Test case:

Checking and the ability to change the status of the car.

Step-by-step:

First, we select the item we are interested in (11), then we see a list of cars with their statuses. Then we select the car number whose status we want to change and change it to one of the proposed ones.

Resultado esperado:

When entering the number 11, the list of cars is displayed correctly, if there are no cars, a certain message is displayed. When selecting a car, the status that can be changed can only be 'in queue', 'in repair', 'completed'. After these actions, I should see a message that the vehicle status has changed.

Result obtained:

The result obtained partially meets expectations, since during the test it was discovered that it is possible to change the status of the car to any other status and not only to 'in queue', 'in repair', 'completed'.
